Poetry ephemeral beautiful vibrant

Sustainability environmental economical social

Energy Architecture is a multi award winning practice where we explore the possibilities of places and people to unearth the potential for poetry in every project. In collaboration with our clients, our quest for meaningful and fulfilling design has evolved into a practical philosophy that transcends architecture and translates to responsive, efficient and vibrant homes. Our experience ranges nationally and internationally, across both urban and rural developments of various scopes.

A Client's experience of a transformed 1877 cottage:

I feel for my neighbour today, a young mother with two children under five. After a string of scorching days, heat is transferring through the brick walls of her old cottage into every room.

With the additions and alterations to my cottage I live in total comfort without reliance on air-conditioning. Today, vertical and canopy shade devices protect cool internal spaces from the sun's radiation. Overnight, internal thermal mass and stack ventilation naturally cool the house.

In winter, rooms are drenched with light and warmth from the sun. Additionally, the sun's warmth is harvested, stored and used.

My living experience is joyful and minimally affected by ambient weather conditions, quite unlike my neighbour.
