

At EME we are passionate about crafting unique and sustainable architecture.

The beauty and poetry of good design lies in creating delightful spaces that are naturally comfortable, inviting and elegantly age.

Our close collaboration with clients results in multi-functional and adaptable homes that respond to their site and life now and in the future.

We are excited to be part of Mullum Creek, it is an inspirational development. We look forward to guiding you through this exciting journey.

“EME has guided us through the process of transforming our visions into an exciting, welcoming space that combines style with practicality...We have found him extremely willing to listen, and work with us, to achieve our desires, whilst ensuring that the architectural principles he has created remain.”

Hilary Cook, Client

“Luke & his team were able to ‘read between the lines’ & develop a design that would delight me by its appearance, meeting my needs & exceeding my expectations. These were clearly people who could listen, absorb what they heard & meld that with their own knowledge & creative ideas to produce a design for a house that not only fulfills its brief but also enhances its location & the lives of the people who will inhabit it.

“EME’s unique approach provides a link between architectural solutions dovetailed with a sustainable solution. In my experience, his understanding of building craft, sustainable materials selection, and ESD provides the catalyst for practical/lateral solutions.”

**Dr Dominique Hes,
Sustainable Architecture,
Melbourne University**

"While environmental responsiveness is uppermost in the brief, it is not at the expense of pleasing spaces and inventive design."

Jenny Brown
The Age, Domain 2004

"EME are one of the few designers we have worked with who understand and are able to effectively use thermal mass and natural ventilation. Their understanding of passive design principles and sustainable building design far exceeds the norm and we have been impressed with their ability to think outside the box and develop innovative solutions."

Ania Hampton, Hampton Sustainability
